Regional Forester
Southwestern Region
517 Gold Avenue, SW
Albuquerque, NM 87102-0084

In 1996, an effort was begun within the Forest Service to map the acreage at high risk for serious forest health problems. The completed maps are to be used for long range planning and for identifying priorities when developing policy. There will be several informational layers developed including: insects and diseases, fire, threatened and endangered species, and wildland/urban interface. These risk layers and perhaps others will be combined into a Geographic Information System to present a comprehensive picture of forest health risk for the United States.

The insect and disease risk layer has been developed by regional and state professionals in the fields of entomology and plant pathology. The map continues to be updated and revised. In Region 3, Jill Wilson, an entomologist in the Arizona Zone Office of Forestry and Forest Health, has been very active with this effort. She has attended regular meeting and coordinated the work of the other R3 insect and disease professionals to develop our map input.

I would like to formally designate Jill Wilson as the Insect and Disease Risk Map Coordinator for Region 3. If you have any questions please contact me at 505-842-3240.
